SUMMARY

With my experience in dog grooming, I've developed strong problem-solving skills, attention to detail, and adaptability—traits that are also essential in computer science. Just like I tailor my grooming approach to each dog, I understand that in programming, I'll need to customize software to meet user needs. Both roles require precision, multitasking, and the ability to troubleshoot challenges, ensuring quality results.

SKILLS

- Oral and written communication
- Multitasking
- Critical thinking
- Problem solving
- Time management
- Worked with Linux operating system
- Experience with HTML and CSS
- Programming languages
 - Knowledgeable in Java, C++, javascript
 - Learning Python and Kotlin
